I would be interested to short CJ from the zone to the weekly pivot {image}

I don't sell CJ only buy. **Let the MM do the selling "the heavy lifting"** and you do the buying with positive swap

At some point you have to make a decision on direction on pairs that are costly to trade. Your money your money management. My money says selling the Cad against Yen not conducive for long term viability of the account.

Once again when trading crosses look at the majors

CJ = UC+UJ

Depending on difference result in CJ. At the moment both at stalemate

Can't remember the last time I posted here but I'm a lurker and continue to study and learn. I make sure to find time to study despite being real busy at work and not having my own PC or laptop at home. Always have to go to the internet cafe. Glad I have time now to check the charts. Great to see my UJ and NC trade worked out really well. These were the only trades I took in the past two weeks. I guess I'm learning but I believe I still have a lot to learn. Thanks Davit for everything you've taught here. Keep them coming because I'm always an eager...

Without anything on the line your mind is not getting any real stress which is necessary to grow as a trader. Just about everyone makes money on demo.

If you are "testing "this method I find that offensive since I have been trading since 2016 successfully and may others.

Like ppxdf said open small real account where you can talk the talk and your brain can process real loss and real win.

good luck 🍀

Something to keep in mind

Going long on AC is cheaper and has more chance to thrust north. Going long on AU is costly on swap and less chance of making progress.

You got to approach trading like you approach business **cutting cost and expending profits.**

I paid 9k fees to broker last year on swap and looks like Ive been told by taxman I can't deduct it hence after paying 30% tax I am also paying Tax on fees.

This really pisses me off.

{quote} I do not understand why your fees are not deductible....should be like an expense to make money

I was told by an accountant they changed the tax code for 2018 which fees are not deductible to make things worst my Broker [Oanda](#) does not send out 1099 form or any profit form and basically from their

perspective IRS does not even know I have account there but does not mean they wont once you put thousands in your bank.. Have not done my taxes yet researching to find someone who understands it. So far not having luck.

Problem it seems because few forex traders are profitable CPA's don't do enough if any all year to have experience. I asked 5 CPA if they done forex taxes they all said no. I am sort of suspenseful stressful state now. Deadline approaching and my taxes not done yet.

Thanks for the advice Davit. I'm actually not testing this method. Ever since I discovered this in mid 2016 I have since then been studying all post from and trades from you. When 2016 ended I've finally decided that this will be my main strategy when I go love trading again. I've actually blown an account already and that really stressed me out..... **Whenever I have my spare time I will keep on studying and learning so that when the right time comes I am fully ready. 2 years of following your thread and strategy, practicing and demo trading.....**

How do you know when is the right time? or when you are fully ready?

If you don't put real money in the line, you may never know these things. 😊

You are following this thread for 2 years, i think you already seen [this Davit's post](#), but as a refreshment:

Attached Image (click to enlarge)

I will continue to demo trade and learn a lot more from you because as of the moment I still can't afford to open at least a \$500 account. I'm not someone with a deep pocket but I'm working real hard on my full time job to earn and save for the capital. In my country \$1 = 52 in our currency. Doing the math will show it's a lot of money. I will earn that \$500 slowly and surely.

How badly do you want to succeed in this business?

If you cannot afford put \$500 in the line, put \$400 or \$300 or \$200. Put something. 😊

Quote

I'm actually glad I'm someone who doesn't have a lot money to put in trading. If I were I would've blown countless accounts. 😂😂😂

[Here is another Davit's post](#) about The Success Mechanism and the Failure Mechanism, that i think is important to read.

Quote

.... If you picture positive goals, it will work like a success mechanism and help you to reach those goals. But if you picture negative things (like many people do most of the time), it will work just as hard at making those negative pictures come true, and that is the failure mechanism at work.

Please, don't see my post as offensive, just constructive criticism. 😊

Green pips! 🏃🏃

*It's not about being right or wrong...*

Davit,

Believe it or note, I went to the IRS for help to the business section when several accountants could not my help me. Over the last 14 years, they have become more lenient before and after my retirement from medical practice.

Or, find an accountant(s) who had worked at the IRS and understands taxation for businesses.

With a tax extension, you are least likely to get audited too.

It would cost less to get direct help from the IRS with taxation then used TurboTax Deluxe software for Business and Personal Taxes, which I did for many years. I even incorporated myself for my practice as a PC, and Inc and placed "No Employees" for payroll for a Real Estate venture before it went down the tube as LLC. I was the President, Vice-President, Treasure, etc. the easy instructions at the SOS online !

Best of luck.

- John

{quote} I have to finish mine this weekend...I will research possibly as early as tonight or tomorrow. I may be in the same boat next year. I have been using TurboTax since 1999. An accountant taught me back then. Been doing my own since. I can forward any info I get if you want. May help more people here. I did a quick search and found this if you do not mind me posting.... <https://ttlc.intuit.com/questions/36...h-i-can-deduct...>

Thank you but only 3k loss allowed is probably wrong.How can you pay taxes on money you did not earn.Example 50k gain 30k net loss =20k profit or net gain then that should be taxed.Am I missing something? There is no way you be taxed at 80k minus only 3k loss at 77k  
Regards

Five fundamental truths:

1. Anything can happen.
2. You don't need to know what is going to happen next in order to make money.
3. There is a random distribution between wins and losses for any given set of variables

that

define an edge.

4. An edge is nothing more than an indication of a higher probability of one thing happening

over another.

5. Every moment in the market is unique.

– Mark Douglas

in term of item 2. We dont need to know what is going to happen,

When I want to have better psychological control, I try to understand what's going on.

The good side is that we know something abnormal is happening.

This is the result of our growth.

**"China and the US may announce a meeting for Xi and Trump to meet and sign a new agreement. In fact, if an announcement is not made today, the disappointment may way on the capital markets"** credit to author, not for me.

We have a chance to make more money tomorrow with NFP.

*Attached Image (click to enlarge)*

China and the US may announce a meeting for Xi and Trump to meet and sign a new agreement. **In fact, if an announcement is not made today, the disappointment may way on the capital markets.** According to reports, China will have until 2025 to meet the commitment to commodity purchases and allow US businesses to own wholly owned subsidiaries in China. The US is pushing to front-load commodity purchases with benchmark objectives for 90 and 180 days. There are said to be some other non-binding promises to be delivered by 2029, but there is no threat of retaliation if the goals are not met, until the 2025 deadline, for which the US retains the right for proportionate tariff action. China has been reluctant to agree not to retaliate but seems to be taking it under advisement. Reports. The pending agreement seems to do two things. First, get it done before the US sells fighter jets to Taiwan. Second, shape the timeframe to be most useful to the next president, apparently on ideas that Trump will be re-elected.

There are three issues that we cite now that we will write about in more detail later. **First, the commodity purchases sound good for US farmers and the energy producers.** However, this is low value-added sectors and seems to do little for US manufacturers. China gets secures soy and energy inputs. **Second, the US is setting a dangerous precedent by seeking a sphere of influence in China.** It is not seeking a lifting of barriers to trade for everyone, allowing the US to compete on a level playing field, which had previously been its thrust. Just as the Belt-Road Initiative is in some ways reminiscent of earlier expansions by the European powers and the US, the shift back to spheres of influence is a retreat from the Open Door, a mainstay of US foreign economic policy since the start of the 20th century, and globalized in the post-WWII institutions, like GATT (WTO), World Bank and IMF. **Third, the US devalued the dollar, by getting Europe (Germany) and Japan to revalue their currencies (the 1960s through 1980s), but America's fear of a devaluation of the yuan is so great that it does not seem to realize that yuan stability is a double-edged sword.** It will make it more difficult for the US to seek a weaker dollar against the yuan. Promising a stable yuan allows China to erode any advantage of a weaker dollar.

[Quoting yohec](#)

{quote} In your example, the 30K loss counts against the 50K gain, so you only pay tax on the 20K net profit. If it was the other way around, 30K gain and 50K loss, then your profit would be 0 so you pay no tax. The remaining -20K cannot be fully written off this year, you can only write off -3K. The remaining -17K gets carried over to next year. The 3K limit is only for losses that cannot be offset by gains.

thanks that makes more sense! I was getting little nervous!

{quote} pls sir can you explain this little bit cos its not in your system

its funny that the answer is in the quote you quoted 🎥 me.

I paid 9k swap fees to broker last year.Do you want to pay more? Dont think so Trading is business you have to cut cost and increase profits just like any other business hence selling high interest rate currencies must be done sparingly and effectually. Example holding UJ short for weeks will be substantial loss to your account on swap fees

something to consider

Tomorrow Wages number if comes out below 0.2 but job creation green which very likely 20k was a fluke mostly related to bad weather then may offset each other. Unemployment may bounce higher.

Just saying Bull USD is not given.

*Attached Image (click to enlarge)*

8:30am	CAD		Employment Change		-10.0K	55.9K	
	CAD		Unemployment Rate		5.8%	5.8%	
	USD		Average Hourly Earnings m/m		0.2%	0.4%	
	USD		Non-Farm Employment Change		175K	20K	
	USD		Unemployment Rate		3.8%	3.8%

UJ at 100R

If you are short already RELAX hold

You have to train your brain to accept DD as part of trading which means no stressing,panicking and if you are then you are over trading your position is too big.

I rarely go over 10 dollar a pip and I can easily bump that to 20-50 but rather build my account without being glued to PC with sweat running down or take mindless losses on short SL's

You are in control not the Price! I am relaxed and watching a movie and do have DD on UJ.Does not bother me.Its within my system parameters

getting tired of free loaders asking for indicators with **minimum to zero participation here.** Heads up you will be removed!

This is not an amateur thread run by amateurs who constantly change indicators templates every week. This is serious trading thread and you asking for things without proper search on your own tells me you are used to free loading mentality and prefer to do no work. I don't need people like that here and its on 1st page in bold letters.

**You got to earn your time here! Need to see evidence of your seriousness of being on this thread or you will be removed.**

**My preference would of been by invitation only but its public forum...**

Its great see so many of you making money! That's the goal.Consistent profits.

AC GU EC were great shorts today. Carrying modest DD on UJ to next week. She does not want to fall now.It is what it is.Market does what it does and we adapt and paddle forward

Market is neutral its how you view it that counts.

[Quoting Recruit](#)

Hello guys, what i found that works for me, is that i stopped to listen guys telling me some percentages. Some say 2, some say 5 or somebody will tell you 20% DD is alright. Its not. Its very specific and individual. You can be comfortable to trade with 2% DD or you can be comfortable with 20% DD. When you are not comfortable with specific DD, you will make a lot of mistakes which lead to entering with bigger positions (as Davit said). Do what fits to you 😊 And honestly , there is nothing wrong on DD at all. Cheers Recruit

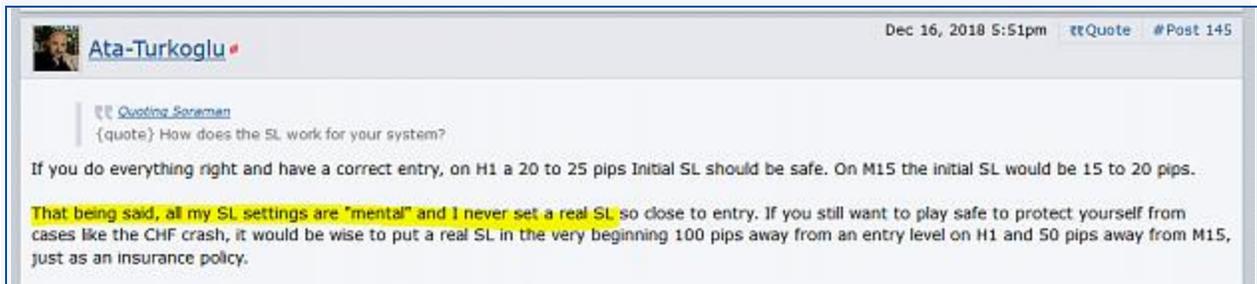

Worth reading

[Quoting Cryptosurf](#)

{quote} Exactly, my DD limit will always vary on where price is at. If it appears that I am wrong then I gtfo immediately. Most of the time I just need to wait a little bit for the trade to develop.

2018 above below from one of the traders here I respect.

[Quoting Davit](#)

Hi Guys About drawdowns This subject is often misunderstood and twisted into gross forum debates and traders who have history of blown accounts. Very few understand nature of DD DD is essential part of any successful trading system if anyone tells you otherwise they are lying and deceiving you. There is no such thing as zero DD system that is successful long term. This comes down to stop losses. Are you going to take a loss every time price goes against you 20-30 pips? If yes you will deplete your account before you know it. Trades need room to develop!!...

Worth reposting

Lot of folks don't really understand what I do. My approach to trading has been consistent and yes I do take losses. **I manage my account that best fits how I trade.** That's as simple as that. You make determination about when you cut losses. Everyone must manage their accounts best that fits your account size and trading lot sizes. That's why I have no rules on SL its relative to each and every trader both experienced and new traders.

This is important to grasp. You must manage your account yourself that I can't teach.  
regards

{quote} Yesterday on GC didn't turn out too good for myself, while I had a 50 pip SL. I'll increase it next time to 100 pips and see how it goes, I know if I had previously had a higher SL like 100 or >I wouldn't have been stopped out. Still hanging in there with UJ Short. It appears to me most traders here don't trade with a stop loss, but I could be wrong?

were you shorting or buying GC? remember pair that averages 180+ADR must also have bigger SL

50SL is too tight on GC just my opinion.

UJ is fine its at strong R and only drawback is sucking margin and swap while holding. That's trading not every swing works. This has been demonstrated over and over on Mark Douglas videos on probabilities.

Keep in mind that every week presents new probabilities fundamentals and technicals. Sometimes holding little more loser becomes profitable. Time is a factor in trading.

You are wrong on SL. I actually quoted 2 posts above. Not placing hard stop does not mean there is no stop loss.

[Quoting Cryptosurf](#)

Here's another example of price structure following a typical pattern. Price was "Marked Up" late into the week and then failed to break above R38 of the following. Each successive week it continued to fail R38 break, until a "Mark Down" late into the week reversed into the following.  
{image} {image}

This is a great post by our friend here Cryptosurf. This is one of the best posts here at Pivots 🍺👍

Now think about UJ in context  
So much great content here on this thread that is why its important to read it.

[Quoting denisius](#)

I am a bit disappointed with my results this week. But I was expecting something like that( even worse) probably. I decided to hold UJ . It was my risk which eventually cost me . Not a lot but not pleasant. On other hand dollar didn't sky rocketed which tells me that something else is in there. CPI next week. Possible scenario is that dollar will be pushed higher before that or correction lower before that. Ether way I am still selling dollar in long term. Short term buy on dips. Left trades over weekend. AJ, EN and CJ. Next week is big numbers...

Its fine mistakes are part of trading unavoidable.Don't beat yourself and keep your positive attitude and work on improving your trading.  
Trading is much like weight lifting your body gets stronger overtime.You can't do 50lb curls right away might start at 20lb but in a year or two maybe.Its a conditioning process.

### Calendar events for week two April

Overall sentiment USD still bullish from good NFP and may carry over to CPI and then we'll see how market reacts to new data specially after Feds minutes.

Not much happens until Weds so I'll start from weds

**Weds-What a monster day. Too bad working,,,,** 😞

**GBP-GDP** big one forecast is lower then previous if confirmed by new data I anticipate G crosses faster drop specially GA GC GJ and less on GN

**GBP-manufacturing** forecast is lower then previous and if confirmed this is double punch on GBP expect drop below 30 on GU and crosses? **Well you better not be standing against the train.** Personally I may reload on GC before if it spikes (unlikely)

### **Euro-Main Refinancing Rate/Monetary Policy Statement-ECU**

**Press Conference** This is much more important in terms of ECB future direction however Draghi already mentioned no hikes in 2019 hence don't expect fireworks here. I am basically fading the Euro specially on Crosses like EC EA

## USD

**CPI** and **core CPI** they could offset each other if both green well chances of GBP and Euro to continue getting the AXE is pretty high probability.

## FOMC Meeting Minutes

Well maybe J Powell could kill the fire here a bit by being very dovish. He is getting lot of heat for raising rates so fast. We'll have to wait and see.

## Thurs

**OPEC meeting**. If they continue the cutting oil output expect CAD to gain (great for me)

**USD PPI**- I don't think this is a mover so my thinking Fed's outlook Weds may carry over Thurs.

Rest of the week is sort of blah

To sum up GBP EUR USD in sharp focus next week. Both GBP EUR **Risk on!**

BE ready!

Seriously after doing this I feel I am in driver seat in control ready to fire my \$\$ catching missiles. It's the feeling of knowing exactly what and when things happen and scenarios already being played in mind like a movie.

This is deeply covered by Maxwell Maltz-The Power of Creative Visualization

I told you guys I was selling dollar! 😂 those few trades I carryover from last week got me a bit nervous. I overloaded them. Honestly. But it gave me a great boost and I recovered all loses and get a little profit. It was risky. UJ could continue run up to 100 pivots. CJ could have stuck in that stupid range. Only 1 AJ that really was good trade and I was confident in that. I closed week positive. Consider that today is Sunday 😂. Now let's get ready for a E and U roller coasters!

Glad you are managing your trades! 🍻👍👍 Its a marathon not a sprint

Another thing to keep in mind that all E pairs most likely will stay bullish until ECB weds  
Why everyone must do the calendar so you have an intuitive roadmap for the week  
Context very important. That's why I would not even consider shorting any Euro pair  
until then. MM most likely will push Euro pairs specially crosses up then dump just prior  
or after ECB

Here is a little swap rate table I whipped up to let you check quickly.

Cheers,  
 Nigel

*Attached Image*

Pair	Long	Short	
CAD/JPY	+	-	X/JPY PAIRS GENERALLY PAY FOR LONG SWAPS AND CHARGE FOR SHORT SWAPS
AUD/JPY	+	-	
NZD/JPY	+	-	
USD/JPY	+	-	
NZD/CAD	-	-	X/USD PAIRS GENERALLY CHARGE FOR LONG SWAPS AND PAY FOR SHORT SWAPS
AUD/CAD	-	-	
EUR/CAD	-	++	
USD/CAD	+	-	
AUD/NZD	-	-	
EUR/NZD	-	+	
EUR/GBP	-	+	
EUR/AUD	-	++	
EUR/USD	-	++	
XAU/USD	-	++	
GBP/USD	-	+	
AUD/USD	-	+	
XTI/USD	-	+	

**Davit favourite pairs**

++= high paying swap rate

Last week was another good one. 😊

This morning I decided to close my UJ short because it was turning against me and I'm not comfortable to give back over pay the swap too.

Now PA is dancing around WPP, it can go lower but it could up again too, in this latter case I'll reload.

[Quoting Cryptosurf](#)  
 Here's another example of price structure following a typical pattern. Price was "Marked Up" late into the week and then failed to break above R38 of the following. Each successive week it continued to fail R38 break, until a "Mark Down" late into the week reversed into the following.  
 {image} {image}

Another example working out properly....

*Attached Image (click to enlarge)*

Attached Image (click to enlarge)

Edit: I positioned trades under the new WP as it was also under the DO. It started breaking down from the Sunday open, however I generally never take trades on the open. I like to wait to see how the market reacts first.

Hi friends i have come thru a position in wich i have don't been before so i will need a help!? The UJ position short is opened from perevious week so now the pivots for these week have new levels. So were i will set my targets (or should i exit), thanx in advance 😊 {image}

Put behavior of the market on U particularly against the events! Look at last week! Dollar gains, look at week before dollar gains. UJ in natural correction. I was selling it since Monday last week. Paid my swap but gains was bigger. Look at the technical! If downtrend didn't play what else is in there? And finally look at price position right no according to Pivots. Would you rather buy here or sell here? UJ loves 38-38 pivots. Month after month. Like clockwork. Would you risk your profit right before the CPI? I wouldn't! It's work man. Analytical work! That's all. Play chess more 🤔👍

Quoting Davit

{quote} what really perplexing me out of all nice pairs majors crosses you choose an exotic with huge spread, Don't understand really. Do you like paying your broker more money? If Yes continue on! I tell you what as a punishment for doing something really idiotic 13p spread I suggest you skip 2 meals! Starve yourself half the day so you don't repeat it. 🤔

Davit,

on gold (xauusd) all values are multiplied by 10. His spread was only 1.3 pips in reality, which is

quite acceptable for this 'pair'.

I make good money trading gold with this system/approach as you have seen in my statement on 4 April.

EU  
 Bearish pin bar in R61-R78 in the Daily chart, previously strong support area. ECB coming later which already revealed their dovish stance earlier this year and expecting no difference and US data coming afterward projected to be up. Projecting EU to drop further (after a spike probably). Let's see.

UJ at 100R If you are short already RELAX hold You have to train your brain to accept DD as part of trading which means no stressing,panicking and if you are then you are over trading your position is too big. I rarely go over 10 dollar a pip and I can easily bump that to 20-50 but rather build my account without being glued to PC with sweat running down or take mindless losses on short SL's You are in control not the Price!I am relaxed and watching a movie and do have DD on UJ.Does not bother me.Its within my system parameters

lot of my haters mostly idiots quoted this post without understanding Pivot trading and my approach to it.

Well that was THE CORRECT call as lot of you collected your money. What did you learn? Patience and understanding when you take a loss and when you don't!

It does not bother me what these low negative energy folks say or think about me but just posting this as an example stay on course!

general tip when you are buying or shorting crosses always look where respective majors are doing

EN is EU+NU

EU is at 78R and NU at WP going north slowly but totally different location.

Which one of this more likely to collapse? EU obviously at 78R plus dovish ECB

This kind of thought process should be standard at Pivots.Its to me anyone with 3-5yr experience trading should grasp the concept right away.

Tracking AC for possible short. AU is really topping out.  
Already posted about majors and minors. With that spike on AUD likely then crash most likely after

News below

**Note on AC there is only 30pips distance between R38 to R61 which I anticipate the spike to be (if any)**

## **Importance of Daily Open and Market Open Hours (London, New York) Price Action - Pivot Levels (Zones) - Events** (PDF File below)

Refer: Post 27,124 March 14 12.53pm and Davit's Post 27,039 March 13.

Following many PM's this Post may further clarify and add strength to the importance of the Daily, London and New York Open Hours.

Do some "homework" and observe how they offer Support and Resistance and especially with reversals where they lie between Pivot Levels.

Apparently, many traders may not have the correct settings for these Opening Hours?

The International Standard for the FX Trading Day Open is 5pm EDT.

Check your Broker, Market Watch Hours. Market Watch should show 0.00 for 5pm EDT.

1. Use Daily\_Open Line Indicator.

2. Check Using:

i. Daily Open (Candle ●HLC) on Daily Chart

ii. Compare Candle (●HLC) on H1 that this agrees

iii. To Confirm:

a) Select Properties, check Period separators.

b) This should show the start of the Trading Day as 0.00 (5pm EDT).

c) Daily\_Open Line Indicator should Start Trading Day on the Period Separator Line.

3. Applying the Daily\_Open Line Indicator 3-times to a Chart.

i. Daily Open Default Setting, Inputs: Time Zone Data is 0. Should agree with 5pm EDT.

ii. London Market Open (3pm EDT) is +10 hours = Time Zone Data setting 10

iii. New York Market Open (8am EDT) is + 15 hours = Time Zone Data Setting 15

4. Frankfurt Open - I do not apply to a chart but may be of use. I trade from USA, EDT.

5. There are specific High Probability Trading Strategies for the London Open.

Refer to Kathy Lien's publications and her YouTube Video.

6. London Open Fake Out! Very often a strong feature at the London Open is a "head fake" or Fake Out then, reversal. Look at the accompanying Chart GBPUSD H1 (Image1) – Background changed for better contrast. Use Zoom feature to view detail.

7. Take any FX Chart with the correct settings and confirm the importance of the Daily, London and New York Opening hours.

8. Settings on Standard Davit Template (Colors User Choice): (Image 2)

a. Daily Open : Solid Line, Color Dodger Blue.

b. London Open : Dashed Line, [Royal](#) Blue.

c. New York Open : Dashed Line, Red.

**Price Action - Pivot Levels (Zones) - Events**

**Price Action, Pivot Levels (Zones) and Economic**

**Announcements first and foremost.**

Market Open Hours often act as Support/Resistance levels. These Opening Hours may often act as reversal levels between Weekly Pivot Levels. WATCH.

Hello all. Been lurking here for 3 weeks. Figured I'd try to soak up as much as possible before posting. Managed to read first 60 pages, and last 60 pages up till today. Started trading the ideas last week, so looking back at initial trade I took, I can see a few errors. Particularly the FIRST trade I took on the NCAD chart. Next week will be better for sure. A few questions for anyone that may know. So I've never really focused on news. Mainly what I've done was try to just make sure I wasn't trading when the news dropped. If you're like me, don't...

use search on this thread,I covered about news many times.Not going to go over again.  
**It is generally good form to do searching your own.**You figure after 3 years this thread has ton of info.Does not hurt to look 💡

My best advise say less and read and listen more.If you are constantly talking/asking for things you can't listen...

listening observing is an art form.

Congrats to you all, its been a pipfilled day for most 😊 GMO thanks for your teachings posted earlier, i'll review that later tonight when im home. Unfortunately guys I was called into work on an emergency, left my positions unmonitored and have come back to huge DD's on EN. Ive got sufficient capital so just added again at the top. Really hoping this dives down south, but with WTI dropping it could be unlikely. Note to self, should have managed the risk better and had hard stops, usually im good at this. Today im giving back most gains. Eeeiiik...

High ADR pairs need more attention. Why I always suggest trading lower ADR pairs until sufficient experience is attained.

EN failed to break daily open 1.6660 lower that should of given you a clue. Price action should be taken in consideration. I placed arrows for you to see it better

I think and firmly believe trading successfully depends your ability to pay attention. Its easier to say PPE but to some it goes from one ear and comes the other.

Here is an interesting article on attention

<https://getpocket.com/explore/item/p...=pocket-newtab>

Pay Attention: Practice Can Make Your Brain Better at Focusing

My Calendar Analyses for Week Sunday, March 24 to Friday, March 29 My thoughts for next week. I extend to Davit my gratitude for analyzing the Calendar for each forthcoming week. I am more able to develop a "mood" for the Market each week and the events likely to govern that "mood". I have followed this practice of Davit's for over 2-years and more recently posted my thoughts. The Comments are entirely mine and serve to remind me during the week. As I look back at my Analyses over the past months I remain appreciably surprised. Formerly, I simply...

worth reading this post again! 2years he has been doing calendar analyses!Why he is top performer.

Need to work for success guys until it becomes natural second nature that is **winning money from forex consistently.**

**Making money should become a habit.That's the goal.You wire your brain for success and nothing else.**

**All successful people have successful habits.Nothing is accidental**

{quote} Also does anybody have any thoughts on EN, has it rallied purely because of WTI dropping off highs? Certainly seems that way - anybody care to predict which way they see price swinging? Looks to be fighting some major resistance

[Quoting Davit](#)

general tip when you are buying or shorting crosses always look where respective majors are doing EN is EU+NU EU is at 78R and NU at WP going north slowly but totally different location. Which one of this more likely to collapse? EU obviously at 78R plus dovish ECB This kind of thought process should be standard at Pivots. Its to me anyone with 3-5yr experience trading should grasp the concept right away. {image} {image}

worth reading above quote and below

EN is at 61R and likely of dropping lower is great by tomorrow

however as Mark Douglas said "anything can happen"

If you are in DD and concern its worth holding little longer. That's what I would do considering its at swing top

**As a general rule I don't take loss between 61-100 this is where swings reach their tops**

**I personally think you should trade lower ADR pairs**

{quote} I 100% agree with you Davit, since I followed your advice, to drop the TDI from my charts and focus only on Pivot's and ADR my performance has sky rocketed!.. 60% gain in 1month. no more analysis paralysis. waiting for TDI cross or confirmation of divergence. I trade Pure Price Action from R61-R100 and S61-S100 zones and good weaker currencies from the R38 and stronger currencies from S38.

Great could you post this month's meta graph? Like how many trades wins losses Equity curve? Thanks

something that spectacular deserves a detail graph 💡

Try these... ( updated/fixed web XML frequency update ) {image} (1) News.ex4 — classic ( web XML updates run/reset timer from an on-load event ) {file} (2) News\_Event.ex4 — classic but with button control for impact selection ( web XML updates run/reset timer from an on-load event and when switching from News OFF to ON ) {file}

still same problem.I think its feed timing is the issue.

happy with the gain this week so far.Got Friday to finish off the week

That's lot more then what I make at my reg job..actually the job is starting to effect my trading I missed NY morning hours where volatility is great...kind of feel I am getting the crumbs when I get home...after the appetizers and entree has been consumed.

GC loose end closed it

Davit, check AN if you haven't already. Great spot even on daily. If not tomorrow , next week would be definitely.

Its only a buy for me. Let MM push down and I will load buys. Some pairs I trade one direction only and this is one of them.

I divulged from how I approach trading here once and end up costing me a lot.Dont like making same mistake.I prefer to be on fundamental side of things.

Some were shorting this from 400-450 and look where it is now.

I learned to trust how I trade.Feel comfortable when I know what I am doing.

I am happy to be part of the best thread of FF.

**Profit this week . (04/07 to 04/13 Gain: 4,57% -- us\$ 916.10)**

I have had goods results and and this week I was able to overcome my average of the last 10 weeks. so, I will do my best to keep my weekly average . **us\$663/week(us\$6638.16 / 10 weeks).**

**Thanks God, Thank you Davit, and also thanks to you that, in some way, also contributes to the consistency of this thread .  
!!!!**

{quote} Great could you post this month's meta graph? Like how many trades wins losses Equity curve? Thanks something that spectacular deserves a detail graph 💡

Ok Thanks - here it is - I had some bumps and I have had to clear some dead wood from my head and negative trading habits. it has been a long journey. I tried other systems so many times - I was here a couple of times before and did not believe that this system worked and I would over trade pivots in the wrong direction and also traded with too much prejudice towards taking a trend trade looking for 300

pip moves. haha does not work in FX unless you are lucky and very patient. Swing Trades is where the consistent regular money. I need to watch more MD videos more often. your consistent discipline is impressive not just in words but also in actions.

Here is the last 30days trading from 11 Mar to 12 Apr. I believe I am improving and stopped a lot of negative trading and taking profits more consistently.

Lossers and winners - some of the bad and good ones... showing that I had some bad trades and in particular made losses on larger position sizes. bad habits.

Also below is the last 2 weeks - 28 Mar to 12 Apr. I have lot less big losers and also trading better in zone and taking profits regularly rather than watching them erode.

Try this news calendar indicator if you are having problems with FF source indi. It draws vertical lines for news on chart. Use as is, but depending on the broker server location time shift simply change the time shift input.

{quote} Its only a buy for me. Let MM push down and I will load buys. Some pairs I trade one direction only and this is one of them. I divulged from how I approach trading here once and end up costing me a lot.Dont like making same mistake.I prefer to be on fundamental side of things. Some were shorting this from 400-450 and look where it is now. I learned to trust how I trade.Feel comfortable when I know what I am doing.

I would have to agree. PA keeps grinding up.

I am happy to be part of the best thread of FF.

**Profit this week . (04/07 to 04/13 Gain: 4,57% -- us\$ 916.10)**

I have had goods results and and this week I was able to overcome my average of the last 10 weeks. so, I will do my best to keep my weekly average . **us\$663/week**(us\$6638.16 / **10 weeks**).

**Thanks God, Thank you Davit, and also thanks to you that, in some way, also contributes to the consistency of this thread .**

**!!!!**

{quote} Great could you post this month's meta graph? Like how many trades wins losses Equity curve? Thanks something that spectacular deserves a detail graph 

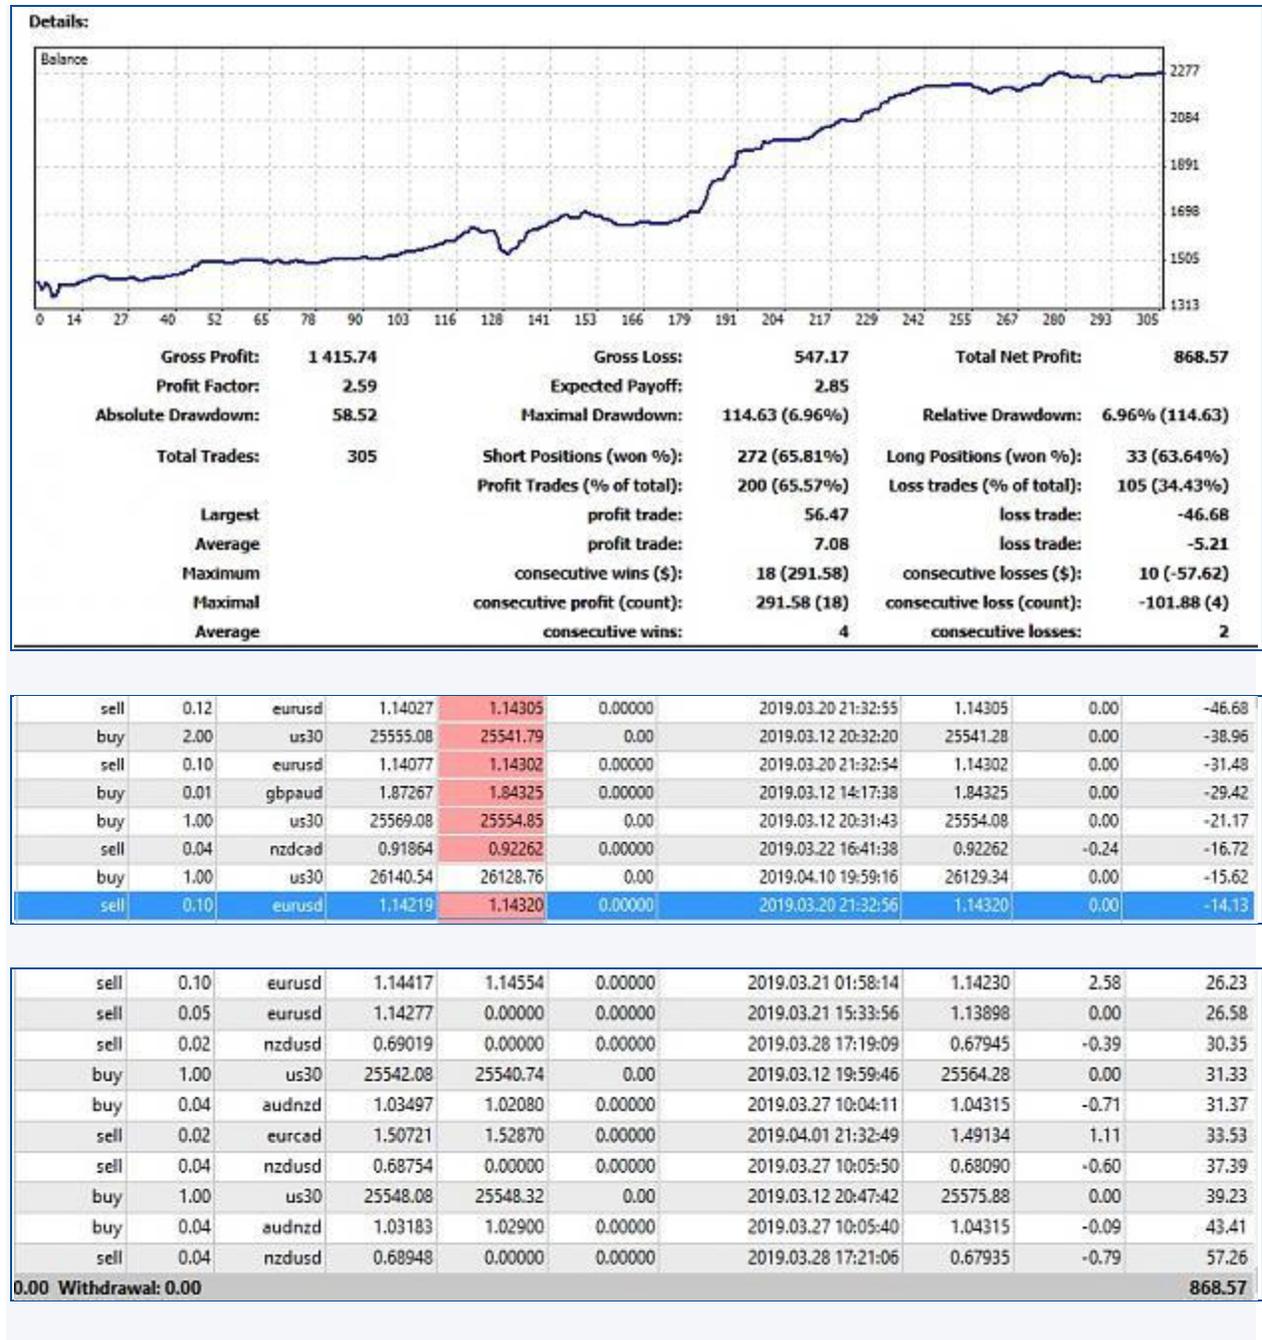

Ok Thanks - here it is - I had some bumps and I have had to clear some dead wood from my head and negative trading habits. it has been a long journey. I tried other systems so many times - I was here a couple of times before and did not believe that this system worked and I would over trade pivots in the wrong direction and also traded with too much prejudice towards taking a trend trade looking for 300 pip moves. haha does not work in FX unless you are lucky and very patient. Swing Trades is where the consistent regular money. I need to watch more MD videos more often. your consistent discipline is impressive not just in words but also in actions.

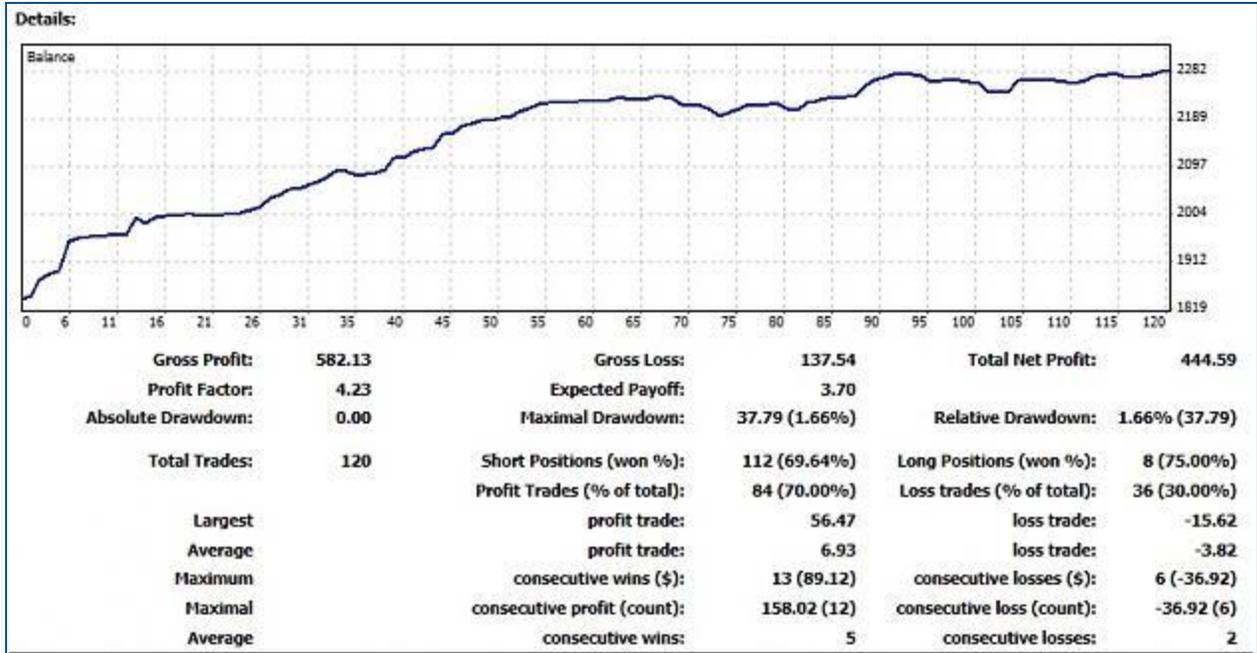

Here is the last 30days trading from 11 Mar to 12 Apr. I believe I am improving and stopped a lot of negative trading and taking profits more consistently.

Lossers and winners - some of the bad and good ones... showing that I had some bad trades and in particular made losses on larger position sizes. bad habits.

Also below is the last 2 weeks - 28 Mar to 12 Apr. I have lot less big losers and also trading better in zone and taking profits regularly rather than watching them erode.

[Quoting darshanaint](#)

everyone made good profit on this week.

Hi darshanaint, probably this week many made big profits, but not everyone, at least not me. 😊

I hadn't much time to trade this week taken away by my job and other concerns. Even in this case I managed to have the week in profit, not a big one but still a profit and I'm satisfied. 😊

Sure, I missed the best trains like AU, AC, EU, but when you have little time and you're not there with your head, I mean focus at 100% as trading at this level requires, you have to be very careful and be happy with what you have made.

I say this because trading in a hurry, I made alot of mistakes like late entry, early exit and nevertheless final outcome is green. 😊

At the moment I've some running DD due to wrong foot entries like shorting EU while China trade data came out very positive supporting the EUR and crushing USD, despite yesterday good data on dollar. Now trading around WR138 @1.1316 previous support area of a certain importance, if it doesn't turn I can consider to exit with a small loss or to wait some more days - since it's swap positive.

What's more important is that this week, a bit far from trading affair, has given me the opportunity to reflect on where I was only one year ago with my own trading and without Davit's system: yes I was already profitable, but much less than now and above all much less confident in myself.

Now back to trading the week is not over yet. 😊

Best regards,  
Bubincka

perplexing day. Its more about MM pushing for stops fills then Chinese data. China does shitload of business with US much bigger then Euro hence if anything stronger USD should be the norm but after Feds dovish tone sentiment is shifting

Below is a list highlighting 15 of China's top trading partners in terms of export sales. That is, these countries imported the most Chinese shipments by dollar value during 2018. Also shown is each import country's percentage of total Chinese exports.

1. United States: US\$479.7 billion (19.2% of total Chinese exports)
2. Hong Kong: \$303 billion (12.1%)
3. Japan: \$147.2 billion (5.9%)
4. South Korea: \$109 billion (4.4%)
5. Vietnam: \$84 billion (3.4%)
6. Germany: \$77.9 billion (3.1%)
7. India: \$76.9 billion (3.1%)
8. Netherlands: \$73.1 billion (2.9%)
9. United Kingdom: \$57 billion (2.3%)
10. Singapore: \$49.8 billion (2%)
11. Taiwan: \$48.7 billion (2%)
12. Russia: \$48 billion (1.9%)
13. Australia: \$47.5 billion (1.9%)
14. Malaysia: \$45.8 billion (1.8%)
15. Mexico: \$44.1 billion (1.8%)

Could be the case of weekend and London wanting to make their highs and NY could crash it down

**I have paid special attention to the negative swaps, and for this reason, this week I paid for the price of my discomfort. I was not able to earn any penny with USDJPY because it took longer than I expected and so I decided to put almost all UJ trades on BreakEven because of high swap rates.**

Really struggling to commit to trading at the moment due to running my own business and having its busiest period. My only passion is trading and sometimes it does cross my mind to sell-up and commit full-time to trading which is daunting due to fact by routine all i know is to get up - go out - and physically work. I miss trades and sometimes miss to close trades. I hope everyone is doing good.... I recently started following Claudia1 and Billy T just because they trade the UK Open and generally only look for 10 pips and that's them done for the...

you need minimum 50k to trade full time. That's stressful. When you get shit days adds to pressure and why you need more capital. I know the feeling but right time will come.

you need to read this book to get confidence.Its life paradigm shift  
"We are not our mistakes!"

**Phase of Success-** The word ‘success’ is used to describe eight stages that a person must go through on their quest to becoming a confident version of themselves with a positive self-image. Becoming this person is necessary for achieving any version of success. Success stands for (S)ense of direction, as in your goals, (U)nderstanding the needs of yourself and others, (C)ourage, (C)ompassion, (E)steem and self-respect, (S)elf-acceptance, or learning to love yourself regardless of mistakes, and finally, (S)elf-confidence. The idea is that by following these steps that will ultimately improve your self-image, you can create a mental environment that motivates you and encourages success.

Finishing the week in nice profits 🍷💰 Biggest winner EN not bad for a dairy farm currency 😊

Daily profits reached.

If EC breaks south it will be stellar but may need more time

Short on AC now in green but waiting for more \$\$\$

Trade Reports for the Month 64% and for the Week 7% Still too many losses - that is due to over position sizing - being too early and also lack of patience. **more work required**. Also now stop trading US30 and WTI. {image} {image}

yes address those areas. On a positive note not bad. 🍺 Too many trades! Focus

Cryptosurf takes 3-4 trades a week! as an example

You going to read lot of BS in this forums people labeling common support Resistance levels with different labels naming channels etc.  
Its important to focus what we do here.

I dislike BS and my approach to trading is real as it gets.No fluff no self promotion no self flattery.  
Stick to it.

{quote} Sure am!! It was a huge mistake getting in too early, but I think I've learnt a few things from it. I'm jotting it down on my notebook - Importance of DOL and PA during these times - Look for low ADR pairs, although slow at times it will get me thinking dynamically and hopefully allow me to build some good practices - MM and Risk. I've never used trade manager, usually stops but I may consider this when I'm rushed in for work - Fundies rule, the spike up on EN was unjustified (apart from WTI hitting lows). Hang in there, have enough rounds...

I was thinking about you today actually.You have displayed classic case of someone over trading.Position too large and you wet your pants and make stupid decisions. Reduce until you can trade with peace of mind.This is critical.

We were on same trade your mindset was "please let me get out without a loss" Mine was let me wait as long as I can to milk this bitch dry."

You got out 6740-45 I think I am almost certain I got out at 6698 average price significant difference.

That's the difference.Same trade 2 very different mindsets 2 different outcomes. You made 35 something I made 575

This on top I had 40 other trades running....  
Work on this.Reduce!until you can relax and maximize profits.  
cheers 🍷

This is general for everyone

Your broker loves it when you use high leverage or bigger positions.Its good business for them because chances of busting the account is huge.

They never tell you reduce its not their interest....

Contrary to popular beliefs reducing position is critical of growing the account.This you rarely read about it.

Even here at FF trade explorer section you read incredible % gains which are almost all high leverage small accounts however how many have been around more then a year? Exactly cycle of gain and bust and back to rat race.**Get smart understand the reality of the industry.**

{quote} that DO hard to break was a sign for probable more up movement of price. some who are new to this might need more patience and let price travel more far from pivot before to start any entries hunt. {quote} I'm on this since we got out from the previous range zone. curios where price will head with the data will come next week. seems they are confident in some expectations. {image} {image}

My approach to calendar events is simple

I educate myself what's coming up. Loosely plan scenarios what could happen then **watch the market and react to it LIVE.**

Nobody can predict the outcome or market reaction however you being informed have a better idea and confidence then someone being ignorant.

I don't know the future and I don't need to know it to make money. Seems paradoxical but that's pure trading. Every second is unknown.

"If you **know** the **enemy** and **know** yourself, you need not fear the result of a hundred battles. If you **know** yourself but not the **enemy**(the market) for every victory gained you will also suffer a defeat. If you **know** neither the **enemy** nor yourself, you will succumb in every battle." (Classic loser in trading)

Sun Tzu

above quote explains my core trading principles.

Just finished my calendar. Took longer than anticipated but glad I did it saw some nuisances and ideas which I could not grasp if I were just casually glancing it.

### **What a great week on calendar next week**

dominated by commodity pairs and right in the middle Euro and GBP news immediate my thought EG EC EN comes to mind. Lets start

#### **MON**

**CAD-BOC Business Outlook Survey**-This report is highly respected given its source and timing in relation to interest rate decisions. It can also have predictive qualities regarding future economic conditions because the surveyed firms are selected in accordance with their composition of the nation's GDP. It's a leading indicator of economic health - businesses react quickly to market conditions, and changes in their sentiment can be an early signal of future economic activity such as spending, hiring, and investment

**Notes to self-Since this is coming out 11hrs earlier than AUD Monetary Policy Meeting Minutes its likely AC may continue going south from previous swing high most of Monday day time. It most likely halt and even reverse once Asia session opens.**

#### **AUD-Monetary Policy Meeting Minutes**

It's a detailed record of the RBA Reserve Bank Board's most recent meeting, providing in-depth insights into the economic conditions that influenced their decision on where to set interest rates

**Notes to self. Despite of housing issues its likely RBA stays on same policy as current. No changes. In which case AUD likely to gain even more cross the field specially AN 700? Why not although correction is "due" here. I buy only on AN until we reach 800**

#### **Tues**

**NZD- CPI Q/Q** Consumer prices account for a majority of overall inflation. Inflation is important to currency valuation because rising prices lead the central bank to raise interest rates out of respect for their inflation containment mandate

**Forecast is positive .03 from previous .01**

**Notes to self-After RBNZ dovish statement its unlikely this to be a big mover however should EN bounce north of 67 its worth tracking it down.**

**CNY GDP-6.3% 6.4%**

**Notes to self-should it be same don't expect much reaction however very green can gave more stimuli to AUD and NZD and less extend CAD**

**Its important to track all commodity pairs each day as more events unfolding.**

**Weds**

**GBP-CPI 2.0% 1.9%** Released monthly, about 16 days after the month ends.This is considered the UK's most important inflation data because it's used as the central bank's inflation target.Consumer prices account for a majority of overall inflation. Inflation is important to currency valuation because rising prices lead the central bank to raise interest rates out of respect for their inflation containment mandate

**Notes to self. Red number here should present maybe opportunity to sell GBP against CAD NZD. GC in particular seems attractive since its next major event after this hence market may position itself for the impact specially that CAD CPI is coming up later.**

**OPEC meeting all day**

**Notes to self. Not increasing output will be good for CAD and less extend AUD and NZD**

**CAD CPI** No forecast/**Trade Balance** NO forecast yet on both

**Notes to self remember GC earlier....**

**GBP-BOE** Gov Carney Speaks-Lately he has no impact on speaking I guess Brexit is dominating this currency.

**AUD-Employment Change 15.2K 4.6K nice n green**

**AUD Unemployment Rate 5.0% 4.9%**

**Notes to self-Should the monetary policy come out dovish and this data mix I anticipate AUD to decline.**

**Thurs**

**French and German PMI most forecast slight green but not much.German PMI has more impact.**

**GBP-Retail Sales** m/m wow real decimal forecast **-0.3% 0.4%**

**Notes to self EG possible buy specially if German PMI comes out green**

**CAD-Core Retail Sales** m/m no forecast yet

**USD-Core Retail** Sales-Very nice green here **0.7% -0.4%**

**Note to self-Anticipate USD bulls returning with a punch....likely scenario**

**Wow what an exciting week to look forward too.** 🍷💰💰💰💰💰

{quote} Closed EC! Watching development in other pairs. Possibly reload on CAD when an opportunity comes up. 🍺🍺🍺🍺

I've been on board EC short since last week. 😊

The point here is should I stay or should I close, considering later BOC news with no forecast it could be either dovish or hawkish.

Atm PA seems to bounce on WPP, let's wait a bit more time at the expense of some pips or to get many more.

Interesting zone reached by Gold. I think it could drop much more, as long as the actual USD strength against EUR continues and so powered by good US data and skirmishes on duties and tariffs between EU and USA.

yes savvy trader always looks for opportunity.

Not very distant past NZ dollar plummeted severely because of liberal PM elected and ironically its been one of the strongest currencies since.

{quote} Yep, another opportunity to reload CAD buys came up! 🤔🧘🏃

It's a very personal choice, but I'm beginning to think that maybe it's just better to close all open positions before red news. 😊

Otherwise, since anything can happen, it's more like to toss a coin that has nothing to do with professional trading.

Then, in case it goes against you, you've banked a profit and are ready to reload at a better price.

In case it goes your way, well all good, not a problem there will be another opportunity.

I rarely will keep a trade open during a red news release. Trading CAD news has kicked me in the balls so many times, so I step aside altogether.

**Survey of about 100 businesses** 💡👁️ which asks respondents to rate the relative level of general business conditions, such as sales growth, investment in machinery, employment, inflation expectations, and credit conditions

Why I want you guys know what you are reading. To me despite of spike on CAD its small almost irrelevant survey of 100 business. That's 100 business which by no means reflects on Canadian economy at large or its currency.

Another point.

You manage your trades best you think it fits your needs. I can't do it for you and its on 1st page however having said this price shooting to R61 and you get out at R61 is honestly idiotic unless the PA continues to go against it but not the case on CAD pairs.

**Don't post what you should do. This actually upsetting me. I got entire system based on 61-100 and people starting to wet their pants at 61**

**If I read more crap posts like these I may start question myself why I am investing so much time here and reduce even stop posting here.**

So if you think 100 business survey is going to crash the Canadian currency to shit? Well think again!  
Should Conservative party win at Alberta election tomorrow this should boast CAD. They leading the polls now.

Market just looking excuse to push the swings to its natural tops 61-100. It's how the MM are making their money. I just exploit this. News analyses is there for you to be extra aware of this fact and respond appropriately.

[Quoting EcoTrader](#)

The market is in a peculiar place. We went from synchronised expansion to a longer and more protracted softening than was forecast. This made central banks take their foot off the breaks and move into wait and see mode. Without central bank influences the market has to look at the incoming data for direction. Mixed data can cause unexpected moves and anyone trading positions that are open for several sessions should be aware that they are more exposed than normal. Canada currently has issues with trade and tariffs, issues with China, problems with...

What is this got to do with what we trade here? It doesn't matter at all. We trade simple probabilities. Between 61-100. Pass 100 - get out. Trade ether works or not. If your price not in the zone before news wait for it. If near - watch PA- take Trade. Why speculate" what's going to happen?". Waste of time....

{quote} {quote} Played out nicely indeed!

MM already priced in whatever the news. AJ was last week's 100R your hanging fruit 😞 AC hit R61 I can go on and on but frankly today's posts were disappointing to me. I spent so much time here elevating the Trading to high level and slightest turbulence it goes to shit at least to some of you.

If I had my forum I know who to invite and frankly don't have that option here.

I missed all good trades today. Sucks. But mostly EC. This job getting on my nerves lately. 😞

I miss a lot of set ups too since I work in the mornings to 12-2pm but I still try making \$\$\$ its adaptation. Example I placed my GC shorts at 4.30am this morning and it was at 61R and came home 12.30 already almost 600 in profit. You just need to adapt.Maybe **waking up earlier like I do.**

**When you want success badly you will find the solutions. That's the key how badly you want it.**

On top of work family also [run this thread](#) and trade. 🙄

CAD likely to gain after election tonight. Still holding AC shorts  
Dec 2018 high not a soft level. AUD in my opinion does not have the fundamentals to push higher than 96 at this junction.

I actually added lot more lots on this. Its my favorite trade this week.

Finally I decided to close my EC. 😊 Too many uncertainties on CAD atm, too many news that could sky rocket it or smash it down. My intended TP was WPP and it will probably get there, nevertheless I exited with a good profit. {image}

you do what you think is right for you.You manage your trades.Me I would of let it run longer....That's just me...

why you do the calendar so you have awareness

I'm working on it sir!

I did a calendar at the beginning of the week, but it's basically just a list of them.

Right now, to help get a handle on it, I'm taking note of what I'm observing while the events are occurring in a word document.

Here's an example of my document that I'm keeping if anyone cares to take a look. The links are just to images so I have a visual, but they won't work as they are in a separate folder on my PC:

## Week of 14April2019

### Prior week Extremes reached:

EUR/USD: PP -> R138+, uptrend all week

GBP/USD: PP+, High about ¾ the way to R38. Mostly a range week, but with wide moves.

NZD/USD: S38 -> PP+, not a whole lot of movement

AUD/USD: PP -> R100+, almost to R138. Wide trend week.

EUR/AUD: S38 -> R38 -> S38, good moves, but mostly a sideways week.

EUR/GBP: PP+ -> R38+, almost to R61, Mostly sideways week

EUR/CAD: PP- -> R61+, uptrend week.

AUD/CAD: PP- -> R61+, uptrend week.

NZD/CAD: S61+ -> PP-, mostly a sideways week.

USD/CAD: PP -> S61 -> R38 -> S38, Very volatile week.

### Effects of news on various pairs:

9:30am CAD Red BOC Business Outlook Survey

Actual news [HERE](#). Seems to be somewhat neutral to slightly negative?

Pairs affected: EUR/CAD, AUD/CAD, NZD/CAD, USD/CAD

**Charts:** Initial upwards spike on ALL of above pairs, within first few minutes. **EUR/CAD previously bounced DIRECTLY off of the WPP before the news, as if it was setting up beforehand.** USD/CAD was just above S38.

8:30pm AUD Red Monetary Policy Meeting Minutes

Pairs affected: AUD/USD, EUR/AUD, AUD/CAD,

**Charts:** Initial spike on ALL above pairs save for AUD/USD. **AUD/USD and AUD/CAD where previously set up for recent bounce off of R38 and R61**, similar to the EUR/CAD for news announcement above.

3:30am	GBPRed	Average Earnings Index 3m/y		3.5%	3.4%
5:45pm	NZD	Red CPI q/q		0.1%	0.3% 0.1%

Pairs affected: NZD/USD, NZD/CAD... Minor spikes in AUD pairs

Charts: SUPER DUPER large spike on both above pairs down. News was negative. I was actually thinking about getting short near the top. NZD/USD was near the top of R38, in an area of recent consolidation. NZD/CAD, was near R78.

Trades taken:

-EUR/CAD

- Started Shorting around R78
- At time of trade, ADR was @138%.
- BOC news was slightly negative it seems
- [Trade](#)(win +37 pips)

-NZD/CAD

- Started shorting BEFORE R61, should have waited.
- At time of trade, ADR was @100-ish%.
- BOC news was slightly negative it seems
- [Trade](#)(win +82 pips)
- Negative NZD CPI news fixed trade quickly.

-USD/CAD

- Started Shorting around R38
- At time of trade, ADR was @159%.
- BOC news was slightly negative it seems
- [Trade](#)(win +67 pips)

Thank you Cryptosurf, the best of Davit doc is gold. A few questions for you or Davit, or seasoned pivot traders: 1. Where is the TDI clone indicator you all use? 2. What times do you focus on for catching trade opportunities, NY Open, London open, Asia open? 3. Is there a best use calendar? I downloaded and am using all the indis and template on page 1 but still look slightly different. Got it mostly though. Thanks. Finally a way to trade that really makes sense. Love your green Davit!

1. clipboard
2. Anytime when market moves that could be Asia London NY. **System is based on location not "open time"**
3. FF is fine but dailyfx is better

Word of advise to you. Forget everything you know about trading. Start fresh and **read and observe**. This is not one of those retarded MA crossed to another MA with damn ass color candy indicators like Christmas window display at the bottom. No stupid arrows and NO stupid trend lines etc.

Clean your mind and you'll do well like many have here!

I am going to share something that is based on years of experience on news and pivots.

When price has ALREADY reached example AC 78R before a major news most likely outcome almost no matter what news is chance of price dropping lower is great much greater then smashing up R78 to 100R and above.This could happen in major interest rate event but most regular news events does not happen often.Its basically priced in.Why I often hold position despite of news **if price already reached 61-100 prior of release.**

I hope this makes sense to you guys.

This is private consultation fee of 1k 😊 to you

Thank you Cryptosurf, the best of Davit doc is gold. A few questions for you or Davit, or seasoned pivot traders: 1. Where is the TDI clone indicator you all use? 2. What times do you focus on for catching trade opportunities, NY Open, London open, Asia open? 3. Is there a best use calendar? I downloaded and am using all the indis and template on page 1 but still look slightly different. Got it mostly though. Thanks. Finally a way to trade that really makes sense. Love your green Davit!

how much more accuracy you want 👍😊

Some don't understand the significance what the chart is showing over and over on all pairs most of the times.

Why ideally I like to work with people who have natural intelligence.

There are some idiots who claim I don't take losses 😂 run DD to max etc. Nothing further from truth in fact have taken over 8k losses since Jan but also made over 10% average each month this year so far! Tight DD control. My haters really don't understand severely underestimate who I am and what I do. Does not bother me but for you guys to know **YES I take losses!** and **YES I have SL !!!!**

Hey Davit,

Take the insults as a compliment of your success. If you weren't succeeding they wouldn't be the constant barrage of knockers.

I read this the other day, its most appropriate to online communities.

Arguing is one of the greatest wastes of time and energy. There is a 99.9% probability that you are not going to change someone's belief system. They made up their mind a long time ago and it is anchored to their identity.

Take it easy buddy 🤝

Have to go to sleep! Guys, wake me up at 3 am for Euro news 😊

would not bother. Just sleep to 4.3-5am. Data most likely RED. Its  
obvious global economy is slowing down. Dont expect much either  
French or German PMI

Still holding on AC short. 😊  
Until now WR61 has held, oil price still at tops, CAD Core Retail Sales  
expected green will be crucial.

Why this matters.

Accept yourself as you are. Otherwise you will never see opportunity. You will not feel free to move toward it; **you will feel you are not deserving.** Maxwell Maltz

When you are always happy taking 50 dollar profit perhaps you can't imagine taking 500 dollar one. It goes deeper then numbers. I made over 20k profit few months ago because I allowed the possibility to achieve it and **had the courage to act.** After that my horizons opened even wider. With every push you are expanding the boundaries of your performance and mindset.

Trading is not just trading. Its a self discovery. 💡👊

I think I'm done for the month too, still a few open trades slightly in profit, AC, AU short.

I'm a bit surprised by the small reaction of CAD and USD to good data that were well beyond expectations. 😊

Since next week I'm going on holiday, I'd like to close all positions by tomorrow, my purpose is to relax, enjoy Family time and don't trade.

I remember last November I was on another holiday and took some trades without being 100% focused and committed.

It was a disaster and besides losses it took a lot of stress to manage big DD. 😊

Happy Easter to everyone.

Best regards,  
Bubincka

I closed my AC and AU, definitely another profitable month, even if finished early for Easter break. 😊

{quote} Sells Vs Buys.... Interesting. You very rarely sell Cad either.

Short UC is buying the cad same on AC  
base currency is always 1st

Worth tracking EU next week. Buying at discount  
don't buy now you'll pay long weekend shitload of fees plus no liquidity  
to go north now anyway

{quote} Well, I'm still working with figuring out what is comfortable in lot size and DD. I have only 10K to deal with and never want to get out of line with margin neither. I'm learning, from you and others on this Thread, everyone has something to offer in knowledge based upon their experience I appreciate you and everybody else.

When my account was 10k I maxed my lots to 5 dollar a pip that is all positions all trades.

I traded 50C a pip and even lower 30C. In trading books basically they are saying 1 full lot 10dollars a pip is sufficient for 10k account but that's too much.This will stress you out and you will get out of trades early before trade even has a chance to develop.50pip loss at full lot is -500.That's significant hurdle mentally to jump over on your next trade.....

Keep it 5 dollars max

I can trade now 30+dollars a pip but don't.I make sufficient profits without stressing out.Key is to relax and see the market not as a threatening place but place where you make your bread and butter.That's a paradigm shift in thinking

April gains so far. 🚀🚀🚀🚀🚀🚀🚀🚀

*Attached Image (click to enlarge)*

[Quoting Hyperfire](#)

Hello everyone. NU in with 2 position, i will carry for the next week. The Reaction over the W100 was really good. I'm outside so i can't post the screen currently ! Please have nice week-end and holiday too !

You don't sell USD end of holiday week. Fees and not smart.You don't know once market opens how it will act.NU could tank lower. Its a rookie mistake learn from it.

Trading is not hard what's hard controlling your urges,impulses,overreactions,overestimations,fears and greed. Market is either goes up or down.Its neutral. I would say trading successfully you must develop yourself 1st.

My Calendar Analysis for the week 04-21-2019. To be added later for EUR pairs. {image}

Nice work! This is kind of effort I like to see.It makes you think.I liked your comment "Considering Loonie's strong economic data, interest rate look for shorting AUDCAD on any up move .9600?? " Overtime your performance will shoot way up. 🍻🍻

Starting the week on Tues

**Tues**

**AUD** CPI q/q **0.2%** 0.5%  
Trimmed Mean CPI q/q 0.4% 0.4%

**Notes to self- Red here or both is impetus for bearish sentiment to develop. Look at crosses AC still seating nice n high and AJ**

**Weds**

Dominated by CAD

**BOC Monetary Policy Report**  
**BOC Rate Statement**  
**Overnight Rate 1.75**  
**BOC Press Conference- Key event which would outline future policy on rates**

**Notes to self. With Conservatives winning in Alberta major supporters of oil pipeline (Alberta lost 130k job because of drop of oil prices and liberal policies) CAD is looking lot better then before election. My hunch CAD will remain positive and bullish. AC prime target and EC**

**JPY**

**BOJ Outlook Report/ Monetary Policy Statement/BOJ Press Conference**

**Notes to self. I don't expect much from this event but any optimism may finally drop the UJ from seating at 1190 for over a week.**

**Thurs**

**USD Core Durable Goods Orders m/m** slight green here **0.2%** -0.1%

**Notes to self- Market may go into corrections on USD despite of possible green number here since lot of majors are seating at their traditional support base EU comes to mind right away and NU not bad either and GU possible candidate.**

**Fri**

**USD Advance GDP q/q 2.2% 2.2%**

**Notes to self- Should this print red I anticipate USD bears taking over.**

These are my notes and I adjust my trading with live charts and events data. These are outlines trading ideas which sharpens the awareness of possibilities.

Have fun make

Not a good days for our country. So many innocent people Killed by suicide Bombers. 🙏🙏

Having 1.5 million Armenians massacred genocided by MUSLIM turks its too close to me and I am very upset at the moment.

"Religion of peace" activists once again spreading their message.Irony of it all.

Deeply sorry for the victims and their families!I know it well how it feels.

875 Churches were desecrated in France last year and many burned down hardly media coverage about it.Interesting while Notre Dame was burning they already ruled out arson without slightest investigation.

Looks like a minority in France has the government and French by the balls!

When you see a range Trade it. That's what I do  
Since I am bullish on the CAD I only sell EC which means I let the heavy lifting to MM and then I short it with fundies+swap on my side. Hope this makes sense which it does to me. This is correct way to trade range NOT both ways. The reason I only short it if there is BO south then I am already in! Both way doesn't work. You heard the saying Bulls make money Bears make money pigs get slaughtered. There is wisdom in that

Pay attention guys! We got classic Pivot set up! If you can't see these trades you should not be here!

This is advance trading tired of baby seating. Can't get any clearer what and when to trade.

Its getting to me lately that I waste too much time here on trivialities

GU picking up momentum to north! Ideally with time and experience you'll be able to see and act almost automatically.That takes time but its like music lot of it is just muscle memory.Result of playing same riff,chord hundreds of times.

Shit, I don't know why everyone complaining about DDs, I am in DD 100% of the time 😂. It's become part of my Trading like " normal ". I keep enough capital to keep trading and yet I am closing every week in profit. If DD Is to high to hold - close it. If I had more I would probably never close any negative trades just simply keep them till they turn green or countertrade them on another swing. 😂 my biggest issue- I can't hold like Davit, Fibo and CryptoSurf and others but I am working on it.

{quote} Denisius, would you state what your maximum DD is?

I don't know what you mean by max? My SL above 100 pivots always. Right now I am in 3% DD on AUD pairs. Depends where I entered, DD will fluctuate . It's too many factors to tell exactly the numbers. I use MD advice " sometime you have to risk 2 to get 1". But I always close above 100 pivots if trade confirmed fundamentally. Like today, if AUD prints red tonight, AC most likely will go lower. Means I would be out. But I already closed AC on spike.

Thanks for the answer. I myself put a max DD at 3%. But were told not to exceed 5% with all trades combined being traded at that time. Though I see a few here at this thread, that make large sums of money have 5+% to 10% DD on some trades, it would seem that eventually that would or could catch up to you as we are in a situation of probabilities, one happening over the next already. I'll stay at 3% for now.

There is qualitative difference noticeable the once who have experience and read the material here and the once who are new to trading and ignore reading here.  
Your success depends on you. This system is solid otherwise I would not produce \$\$ week after week.

Don't have anymore "wisdom" There is no magic pill just hard work.

*Success is a habit practice it daily*

Hey Davit - i have a question that i hope that you will answer for probably the 100th time - or maybe one of your followers can answer. Ive been looking around for the answer but dont really feel like i got the exact one. When you trade in "badges" to decrease risk, how come you place several trades at a low low size with sometimes seconds in between (looking at some of your images of trades taken on chart) instaed of just 1 trade with the combined amount of x lot size? Like 1x 0.30 instead of 3x 0.10 that are taken within a minute anyway? I've...

I have increased my lot sizes and number of trades has also been reduced. Doing what I have done advantage of closing at different levels.

*Success is a habit practice it daily*

Today's results despite of being at work best time NY morning but still managed almost 1k 💰

Closed some EN

Missed some great set ups....Well I do my best with limited time I have with high liquidity time.

In general when price hits 61-100 before a news release I relax and counter trade. Its basically priced in.

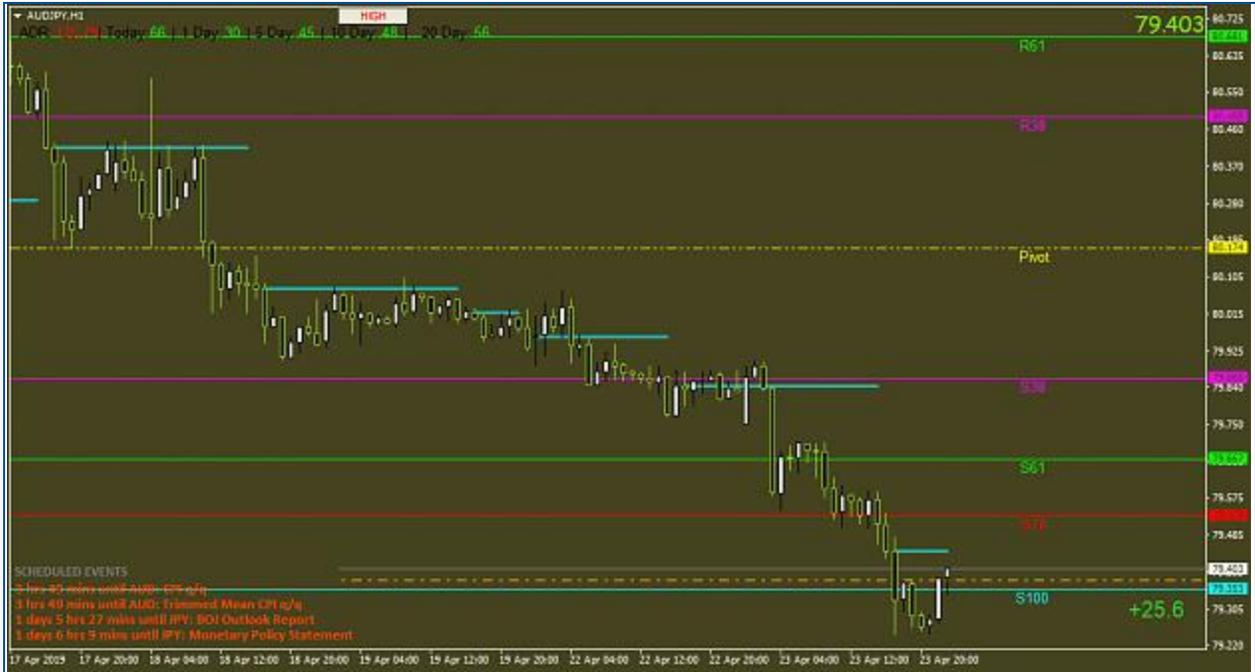

Example AUD news tonight. Does not matter most likely AUD will appreciate no matter what number it comes out.

Example I took long on AJ and feel confident about it. Its solid trade in my opinion. This is how I operate stacking probabilities in my favor then **allowing** the trade **to develop**. Hope this makes sense **if not then this thread is over your skill sets.**

goes without saying anything can happen!

Notice my entries are above the spike which means **I waited for PA to turn north**

track EG very close

Notice also market picks a currency dumps then reverses same following day or week. Today's dumping heavy was CAD and GBP but they are maxed out tomorrow could be Euro Yen

You guys understand right its rare a currency get bought every day. This cycle could be triggered by news like on CAD promise of continued high production keeping Iran out etc. GBP still jitters on Brexit however same exact currencies could be bullish tomorrow.

**Studying the calendar gives an insight which is likely to be risk on or off.**

Quoting FXFutures

{quote} Well just look at the AUD futures.... They have been selling massively - I'm not knocking this method but it has some flaws. Never go against the power of the forex futures. I wont say more as its offtopic to Davits thread but this method needs more.. Not to Davit as he is very wise in research etc but for all new to this method. {image}

As MD says, "anything can happen" and so it did. Just because price was sitting at an outer level, doesn't *always* mean that a news release will reverse it.

Be be prepared if it does, and if you're trading thru it then set your risk accordingly.

[Quoting kikibab](#)

The AUD pairs weren't ready to turn around as most of them were in a downtrend and the news helped contribute to further selling. Never follow the pivots blindly and you can never believe if the news is priced in or if it isn't.

For every "down trend" swing that **didn't work** hundreds and hundreds **did work**. So what does it tell you? Exactly most amateurs don't understand concept of probabilities. I also said "Anything can happen"

You are removed for being totally **useless** here

I also insisted to work with traders who have experience because I am tired of explaining myself.

For the amateurs and also seasoned traders you must develop solid firm attitude certain toughness in you when it comes to trading. Think of Samurai warriors being fearless is profoundly necessary. You can't go into a battle with peeing in the pants.  
**Toughen up guys! Pull up your belt and manage your account.**  
Real traders always surfaced to the top because they mastered themselves and the market.

DD on EU but feel good about the trades. After taking them price dropped little deeper.

MM basically pricing in advance GDP

The way I think great got EU at bargain prices.. This is kind of DD I consider good DD which is **allowing the trade to develop**. Let it alone

Nice opportunity in the making to hit EC again. Love shorting this over and over.

CAD press conference was rather bullish. They gave no indication of rate cut. CAD should recover.

Between basically 38-38

How successful I've been on EC? 2nd highest earner \$\$

Results this month so far

Its interesting one bad day and the army of noobs fly away as easily as they came.

Sadly this industry attracts lots of simple folks who blow their hard earned money without proper education and experience. If they only knew success is just around the corner.....

There is learning curve in Forex.Takes 5yrs minimum to become proficient and consistent profitable.Most gave up by 2nd year or just run out of funds.

95% losers in the industry is true only for those less then 5yr experience.Adds get better after 5yrs.This part is crucial to understand

Several senior traders including myself got this message on PM

**"hi bro . i am stuck in nzdusd short trade and audjpy . its over sold hold these trade is batter option what you think about it? "**

Obviously this person was not ready to trade PERIOD!Even the verbiage is wrong because short NU and AJ would of been massively profitable.

Could not even articulate the positions correctly.

What happens when these folks IGNORE MY WARNING ON 1ST PAGE

**I will refuse to work with New Traders PERIOD! I will kick you out without slightest hesitation!**

**What we do here is equivalent advance drawing class not beginning drawing 101**

You can't jump in advance class and start asking questions that are over your head and **disrupt others**.Everything has its rightful place and time.

**Respect your senior traders! They have put their time!**

**You got questions use search function! You want indicators its in clipboard!**

**I will aggressively clean this thread from violators!**

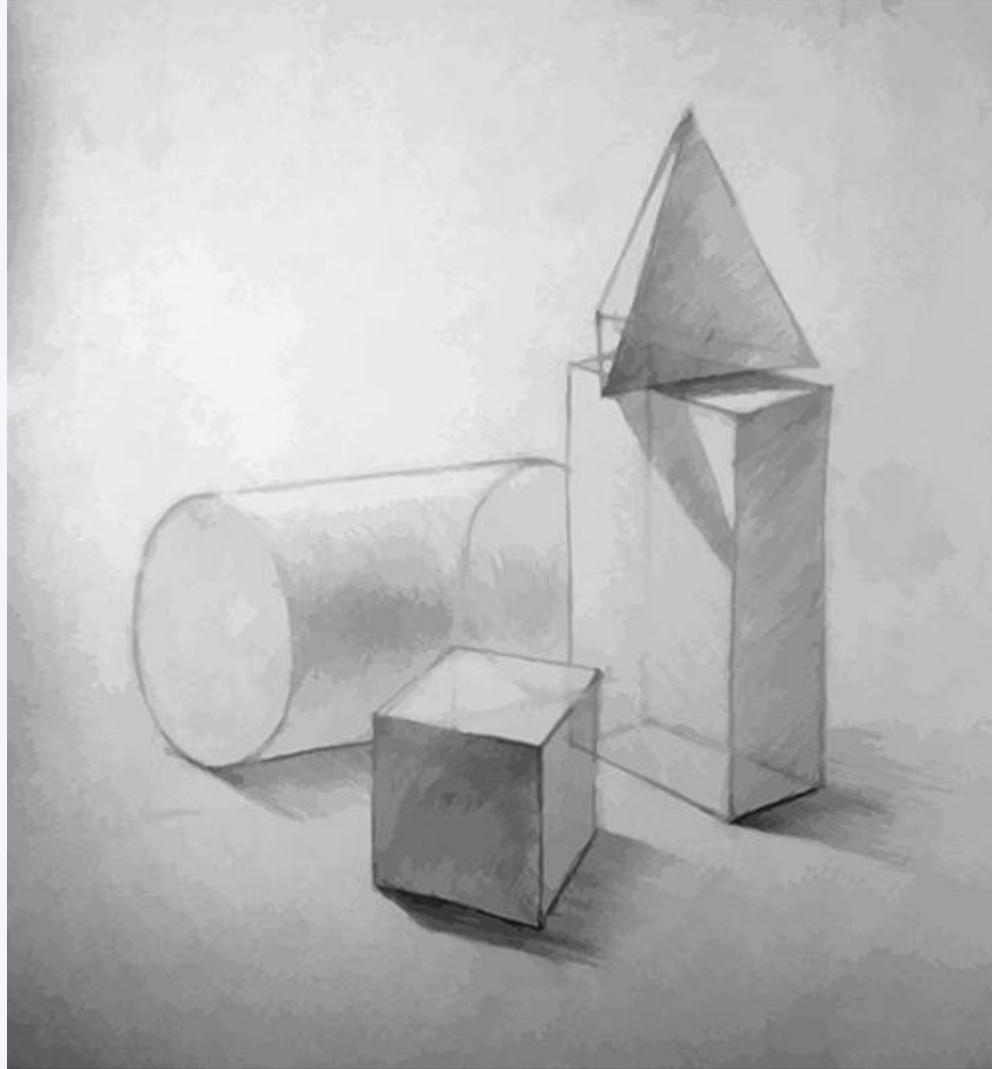

**Bottom is Trading 101 cubes and shapes.Start there before you open life drawing class!**

For those who do not believe in market manipulation, we are now witnessing it live. The dollar continues to rise without any reason as well as OIL. It is typical of market makers to take advantage of the moments of less liquidity sending prices in their direction (I see that periodically in the last 9 years of trading). I see damage coming to the horizon My question is ... who really wants this so strong dollar??

Agree and may change dramatically after GDP Friday. It could print Red we had lots of bad weather all across the country. Market as usual always 2 3 steps ahead on calendar.They are pricing in the US GDP.

Hi guys

What have we learned this week? and Weeks prior? Why I insist on Calendar analyses and like to suggest looking ahead 2weeks to get an idea why market does what it does.

We have Feds Rate and NFP next week 2 huge events and market buoyant from recent stock market highs is extremely bullish on USD however Newtons law of for every action there is a reaction is still valid. Yes There will be corrections coming and most likely after next week's NFP

Strap your seat belts and just wait out.

Selling the yen on +swap are great trade opportunities now  
CJ AJ NJ in my view great longs

Wild week with some big moves and potentially more to come today with USD advance GDP as the key economic release.

Been limited with trades this week, but wanted to show one of the additional tools in the pivots arsenal that I often make use of - using prior weekly 'missed pivots' as a guide for potential areas of price action to tend towards. It's not for everyone - just an illustration of how it helps me to plan my trades.

I've used **EJ** as an example. Big upside moves over the past 3-4 weeks, left a missed weekly pivot for **EJ** in early April. Last week saw some consolidation and rejection of the 126.75 level and I went short with a couple of trades that worked out well. This week however has

seen significant downward momentum with a lot of Yen strength, but it also meant that missed pivot from early April came into play and it was eventually taken out at 124.30 (around the **S138-S161** area) and with a nice 4hr pin bar, i've taken a small long to see if price bounces back to around **S100** or beyond. Now I have no idea where price will go. It could retrace and test further lows for the week - or it could bounce, given the significant extended down move. I'm basically playing with probability, having seen this set-up work for me previously. If it doesn't - no big deal, as will just move onto the next set-up.

*Attached Image (click to enlarge)*

However this isn't a fluke of price action. If trading **AJ - the exact same process occurred**. Missed pivot in the first week of April - pivot revisited this week, with price bouncing thereafter. **Powerful stuff these pivots**. Green pips all 👍

market really expects today's advance GDP to be very green (hence the extreme USD gains) however should it print red anticipate sharp corrections.

We had government shutdown, nasty storms hence Red number may not be too unrealistic....

Quoting Ratel

Biggest lessons I learned this week is more on the psychology and discipline side. As an example I kept on adding LONGS to AJ as it was heading south. I got caught in the trap of thinking that it must surely reverse at some point. And it will reverse, but I was too early on it. Not a problem to leave the trades open but then your pockets need to be deep enough to do so. What got me was that I should have stuck to my deeper personal preferences. For instance, I don't like getting into a trade once the 78 line is crossed convincingly. Once the price...

Just maybe you should learn that giving is part of taking. **Guys who only take will fail in long term.** You got no senior traders here subscribed NOT this thread or myself but writing here your "journey" **I suggest you think why you here** and in the meantime **I wont respond to you** or any feedback on trading until I see commitment to this system.

I dislike freeloaders! Actions speak louder then words.

The screenshot shows a forum profile for a user named 'Ratel'. The profile includes a header with navigation tabs (Forums, Trades, News, Calendar, Market, Brokers) and user information (Davit, Logout, 5:36am). The profile itself features a silhouette icon, the name 'Ratel', and a status of 'Member'. It lists online activity (viewing 'Pivot Trading'), local time (11:36am), and join date (Jan 2018). A 'Posts (127)' section shows 127 total posts, 124 thread replies, 2 images, and 3 story comments. An 'About' section indicates the user is from South Africa. A 'Network' section shows one subscription to 'barrydw'. An 'Activity' sidebar on the right lists recent actions such as replying to 'Pivot Trading' and shouting on 'JohanMarais'.

Yep, I was subscribed to other threads and traders till I came across this thread. I believe that this thread is the only place I want to be at. I cancelled other subscriptions, although I must admit I need to maybe clean up more.

But I can assure you. I am working hard at this. I haven't felt I could add any value with posts therefore I stuck to the idea of read more, say less. I also do my calender analyses every week, even though it is in my own language.

If you insist, I will start posting trades I take in future, no problem. Definitely don't see myself as a freeloader, just as a student at the moment.

No comment expected.

{quote} Closing the longs on E/U with a little profit a fraction above 1.1144, current PA makes me less committed to keep that positon running. Respecting this thread's main trust I do not want to introduce confusion by ccommenting on other insights that are subjectively involved in trading, and are outside of the scope of this very worthy thread.

I see your point, I will remove my previous post. Was written as a way to clean my head a bit.

If you control your greed and keep positions small you can basically harvest pips week in week out.Key is allowing plenty of margin and small positions.

Quoting rupasi

Good morning all! Do the seasoned pivot traders exit at week end? Or hold in any cases? I am in the pips on aj and expect it to head north to S138 or S100 at least. Thank you. {image}

depends. With Feds+NFP holding USD sell maybe not wise however I am holding my AJ longs

There ´s a couple of "secret fibonacci numbers", which are supposed to sometimes create some massive reactions. 0,886 which is the square root of 0,786 0,9441 which is the square root of 0,886 Wonder if anybody knows how to program them as PIVOTS. And wonder what the reaction would be to those levels. They don ´t bounce too often, but when they do...(even in monthly charts). Here ´s an example, on a NZDUSD Day chart.. Have a fantastic weekend... 🏇🏆🍷🎸

🏈🏊🚴🏂 {image}

try not over complicate

Mundo , here in Canada , Regulation Controls associated with ANY PROJECT that can impact our Natural Environment are extremely "tight". The change in Government in

Alberta is NOT going to speed up the Pipeline Process one iota. Here in Canada , the Treaty Rights of our First Nations Peoples are respected , for the most part. Alberta has been in "irrational exuberance mode " for years and have wasted Billions of Dollars in Royalties. Now , Alberta is crying "poor mouth".

The loss of 130K jobs in Alberta is simply the "cutting of fat" , that has always existed in the Oil Industry in Alberta. Hell , you can't get Albertan children to get out of bed for a job that pays less than \$18 per hour. Here on the EAST COAST , many grown adults have jobs that pay less than \$14.00 per hour.

Had Alberta followed exactly what the Leaders in Norway have been doing since the 1950's , Alberta too , would be sitting on 1 TRILLION DOLLARS IN CASH like Norway. However , nooooo , Alberta wanted everything yesterday and have never planned for tomorrow , next week , next month , 10 years from now.

The younger generation of Canadian kids will absolutely NOT give in to the Oil Industry and sacrifice our beautiful wilderness areas for money.

Alberta sells , what Albertans think is their Oil , it's actually Canadian Oil , at a \$15 per barrel discount to the US. Cudo's to the US negotiators because that is the only way that the US would agree to buy Canadian Tar Sands Oil.

Albertans still think that a Pipeline to the Coast of British Columbia will solve all of its financial woes by opening up "new markets" to the Oil.

Tar Sands Oil is "dirty" and much harder to refine than WTI.

While Oil is worth 12 to 15% of our GDP , AGRICULTURE is the largest contributor to our GDP at 18 to 20% of GDP , depending on whose reports one wishes to believe.

Can't wait until the US News next week and see how the Loonie responds to falling Oil Prices and possible good US News.

Regards ,

My comment was not about you.I have no idea about your past.I was just making a point that criticism is healthy and necessary part of what we know as civilization.In today's unhealthy PC culture people are afraid to say what they think which brings me back to GreenEarth comments.I thought it was refreshing insight.

{quote} why will you get curios about other people results instead to mind your own charts and result? whats behind all this curiosity for people private accounts results? you must consider there are no strict rules here for people to post their results mandatory or over any strict period. everyone is free to post what he want. If you ask me... I was never curios about other people

results as long they are free members,they have the right to post what they want when they want and also keep their account private if they want to do so. nobody is forced...

agree furthermore system is as good as the trader trading it. You can see it here some totally excel and some may struggle.Has nothing to do with system but everything with the trader like over tra ing allowing losses to get out of control etc.Trading is most part self discovery.Some have lot more into hence wiser some new and get crashed. To understand why same system can have very wide results you just need to read about turtle experiment.

What was revealed in the experiment even trading other people money with hands on advise and direction and strict rules most failed.They failed because they could not follow rules.

Example here people not able to follow rules.

No added indicators and banned ton of traders because they **could not let their past go**.I said no CHF trading here still people do.Ton of examples.Humans are fickle.Not everyone has the right character to stick to system.

**Fibo38,Mundo, Cryptosurf** has been here almost from the start sill kicking butt.Great traders.I am sure I am missing some I apologize very tired now

Davit explain your new profile image? From a distant it looks like Messi. Davit do you care to explain your views on the fundies this week. A pretty busy weak apart from Yen. I think we see the dollar sell off until Wednesday and then continue to the north side. I know you say your aggressive trader but times like this do you enter with a more cautious nature? Also when you play chess are aggressive attacker or do play with more defensive strategy? Thanks Random Riese

Once you do your calendar then you can start being in sink with the market. Its USD heavy with FEDs and NFP hence my focus will be on crosses then we'll see how PA moves. Monday Chinese data comes out and may move the crosses like AC north which is seating very attractive now.Oil may start correction which will weaken the CAD hence EC shooting up north above 50 and AC claiming north as well. I don't see CAD gaining much this week.

I don't predict I just run likely variations in my head. Its maybe result of playing too much chess...just kidding  
He is my nephew Davit whom I love very much.

{quote} Jesus christ, gz on the results! Funny how u put up that longtime graph right now, as i was about to make a post regarding exactly that. I really feel like this thread needs some long-term graphs, and not just for the past month or week. I started reading and finding interest in the thread about a week ago, and i started from page one currently at around page 150. One thing that i see again and again is people posting charts of the past 5 trades, or the past week, and they praise the method like its a no-brainer moneymaker without having...

Please go through some posts from Davit about the edge and how to discover the edge. Initalily, I was lucky that Davit posted many trades

which I blindly copied, and gradually built my own read on the market.

Also, read the book Bird Watching in Lion Country by Dr. Dirk; recommended by Davit and it's in the clipboard, if you need more conviction about the strategy, this thread is a good example of how to execute.

Aussi , you have absolutely misinterpreted my post. I have Family in Alberta , 3 Engineers who work in the Oil Industry and they agree with me 100%. The industry has been totally mismanaged due to greed in Alberta , and now Albertans are admitting it PUBLICLY , for the 1st time. The change in Government is actually going to be an impediment to the development of any Pipeline. Saudi Arabia declared 3 years ago that OIL will not be the main contributor to their Country's economy by 2030. Solar Power will be. Saudi Arabia has been tapping Germany for its solar technology for over 20 years now.

Hey Davit, keep the winners mentality brotha! Winners know!

**Winners understand their sphere of influence and pursue the awesome experience!**

Winners understand that accomplishing something of insignificance doesn't really feel like a win at all. They rarely waste time with boring or mundane projects or initiatives that don't hold their interest. In fact they find ways to execute mundane things with little effort. Life is finite. Winners invest their time and energy in the things that excite them and as a result reap benefit for themselves and the people they care about.

Some things in life are beyond our control: the weather, the market, the price of bananas. Winners know when it is useless to try and apply effort or influence beyond their actual capability or the capability of others to comprehend. They may test and push those limits, but when faced with a near impossible task, they will conserve effort and move on. Winners focus their energy on the people and places where they can effect the most change and growth in positive ways. Be a winner Davit!! Stay a winner!! Time and energy wasted on anything else will only prevent you from moving forward and growing in greatness.

Whatever you decide don't become a stranger brotha! Its been a pleasure watching you grow and I always enjoy associating myself with other winners. Winners Know!!

Enjoy, have fun, trade your plan, make a great day, do your own due diligence and may we all make bank! Game changing Bank!! The kind of Bank that makes you just Think and Grow!! 🙌

Hi Guys thanks for well wishes and support.It really gave me new confidence to continue since this is becoming something really beautiful and profitable.

You guys are correct.Going to focus on my trading and people who get it.If you dont then it has nothing to do with me.

With that closed GU with beautiful profit. Almost 2k today. Missed the short on EC because was at work.

Still DD on AJ but 2lots. Not 40 lots as some idiot claimed name

starting with H. You'll read lot of BS what I do. Almost all get it wrong.

Find it amusing the guy claiming he worked for a bank for 15 years and all Fibs are BS according to him and here I am CNTtrader, MrPip Scott making good money trading exactly that Fibs! Have over 10k trades over 4 year period all based on Fibs and PA. Its really ironic.... MA are BS, Fibs are BS, Pivots are BS, techinals are BS, News are BS Elliot waves are BS and yet there are many many traders trading some components of these successfully. **In the heart of it its you the Trader that makes it work!**

{quote} I agree especially kiwi which i think has been oversold, with the Yen on holidays is this the next safe haven after heavy week of fundies? And Davit your part of the furniture here at FF. Just like the other Gurus you mentioned it's crucial we have guidance in order succeed in our journey.....Take you back page 4. {image}

I strongly dislike "gurus" find it offensive and I think my friends as well. Lets keep that out of it please.

{quote} Hey Davit, keep the winners mentality brotha! Winners know! Winners understand their sphere of influence and pursue the awesome experience! Winners understand that accomplishing something of insignificance doesn't really feel like a win at all. They rarely waste time with boring or mundane projects or initiatives that don't hold their interest. In fact they find ways to execute mundane things with little effort. Life is finite. Winners invest their time and energy in the things that excite them and as a result reap benefit for themselves...

Thank you my friend. You always pop over in most critical times! Means a lot to me. 🙌🍷

To amuse you. You may want to read this. 😄

[Quoting neilsdigest](#)

These theories don't work and never will. Elliot (Elliot Wave) made no money from his theory and neither will you. As for the Fibonacci number sequence – This was devised in the 12th century, to solve a problem to do with the copulation of rabbits and has nothing to do with finance. NOTHING. It's complete bullshit. Leave the above theories to the dreamers and traders who believe it's easy to make money. When you trade you are involved in trading odds NOT certainties, don't believe anyone who tells you otherwise. If markets moved to a scientific...

Pay close attention to US Personal Spending negative data. Market did not get the numbers to confirm survey expectation. There is economic growth and job creation but no positive evidence of consumer spending. All the positive outcomes might eventually mean nothing if people are not spending and might not help the FED change from neutral position. **I am looking to see dollar strength early to go dollar short towards mid to end of week** but being very selective on trades taken and aiming for 20 - 25 average...

1st Thank you for your support.It really showed you are a man with character!I noticed very nice progression of your thought process and see you growing as a trader.This is kind of things I look for others a keen observations that creates pathways to get in sink with order flow, market sentiment.

Why I insist you guys do the calendar.It has larger ramifications

Looks like one of my trolls was here claiming he followed my system for 3years and was not successful. Fair but real question is was he really following my system or failing to apply my rules.

There are many many senior pivot traders here are trading the system successfully and consistently. How is it possible that for some it works and others it did not.

For the answer look what the successful pivoters are doing right and look what failed pivot traders doing wrong.

This brings back to Turtle experiment Worth the read (google it and read it). Majority of selected participants failed even with thousands of trading capital not of their own provided and hands on training as well. Majority could not follow the rules. These were bright people carefully screened out. It all came down to execution. Majority could not execute the core principle of Turtle Trading. **Same here it all comes down to executing the principles of pivot trading.**

**Below one of the most consistent Pivot traders here. There are many many more but just using him as an example.**

<https://www.forexfactory.com/showthr...5#post12230995>

Ask him what's his secret! 👍

I am happy to be part of the best thread of FF. Profit this week . (04/14 to 04/19 Gain: 3,69% -- us\$ 767.84) Profit PARTIAL this month April . (04/01 to 04/18 Gain: 10,32% -- us\$ 2,145.18) AVERAGE 11 weeks . (us\$ 7,354.64 / 11 weeks -- us\$ 668.00) Thanks God, Thank you Davit, and also thanks to you that, in some way, also contributes to the consistency of this thread . !!!!

If we talk about same guy i was commented in other thread than that was really funny. how the heck to follow one system based on weekly levels and zones and only after 3 years you figured it doesnt work,i had so much fun on this one. for this system you dont need much to see if there 's a problem between screen and chair,then you can take some proper action. but 3 years to figure ? ... damn 😂 what if system was based on monthly pivots what then? hahahaha 😂

*Take what you can, give nothing back*

I suspect he was lying and also claiming back testing it did not work! Dahhh I already have my opinion posted here about back testing.Claims sometimes I took trades at WP or 38 and not part of the system...Yes I covered that as well which tells me the guy was lying.If you had been here for 3 years you would of seen the context of all those trades at WP and 38 where majority are range market situations which I covered.

Bottom line the guy was lying thoroughly or totally inept.

Hope you continue your success.Always think about risk profits take care of themselves.Danger is getting over exuberant then blowing all the profits.Just execute Pivot rules and you'll be fine Pay attention to your swap fees.They seem large...Probably you were holding UJ short for long time....Be careful with that..

{quote} think i am here since last year June, but this is not relevant, i just needed one month to see if this pivot levels and system fit for me. yes i had a big problem at that times and that was

to trade too many pairs,problem who required me a lot of work and hedge then to get out with pants up from some pairs. in time i learned to focus on less and spot better the zones,and so with practice i got better and better cos i was always used to trade corrections before. now i spot 4-5 pairs (is still much i think) i trigger and i go to sleep without...

You guys are all correct.Just do my thing here and ignore the haters.I am also learning the ropes of social media.I think I am understanding the fickle characters mindsets better now.Yes that guy was a perplexing character to say the least.

Don't let slackers and pessimists get you down Davit. Those types loathe all forms of success, confidence, and happiness, and they will do anything to turn you against yourself. Your system pretty much made me a consistently profitable and confident trader. Thank you very much for all the time and effort that you put into the forum, and sharing your knowledge. Short: USD/CAD Target: Between S38 and S61 {image}

👍 I am short as well but holding for lower. I think Feds are going to play flat.No hikes and No exuberance.Which should drop the USD Bulls to highway resting spots.

Hi buddy,

I just dont think you need to justify yourself anymore. Anyone who has been trading long enough knows the real reason traders are profitable. At the end of the day we know markets are just time, price and order volume, successful traders understand the application of probability and trading systems around these fundamental facts, if it be harmonic, range extensions, pivots the facts come down to the trader and the application of their trades around the systems they have manufactured to provide the probability of a successful outcome. Your system can see you move into a percentage of draw-down in some instances which in itself is one of the factors that add probability and success. People knocking you here dont seem to understand the difference between a reckless draw-down and a calculated percentage draw-down on an account that, has been well thought out and part of your trading system. People who focus purely on the system and not the persons experience and ability just don't get it. Its like saying I only have to worry about an entry rule, where I take my profit or how I execute the trade has no bearing on the outcome.

Just my say, I don't like to getting involved in these discussion as I believe all they do is sap your energy, you can see it in your exhaustion and frustration in with these people. You know and we know your successful in your trading and give a great deal to the people on your thread out of your own time. Its hard giving energy to those that you believe are sincere, put in effort and want to trade with you whilst ignoring the knockers as they are personally attacking the effort your putting in. People knocking are just people wondering why they cant achieve when they see someone else's success, it happens in every endeavor, especially online where they can do it under anonymity, and especially trading! as we all know the hard work it took to get there.

All the best buddy and don't let them drag you down. 👍

My advise dont sell GU better let MM push it down then you buy it up. Should drop before the Feds tomorrow

When trend and fundamentals shift I prefer to go with the market. Market is bullish on the GBP **hence I will only buy the dips.**

Hope this makes sense. I prefer to trade towards most logical direction. Selling GU at this point in my view would be considered a counter trade.

Since Feds statement tomorrow carries so much weight and negative sentiment built in and USD so high **corrections are natural reactions** hence GU could go up another 100 pips or more therefore selling it now would be without edge and potentially become a losing trade.

This is why trading at Pivots is discretionary. You as a trader must make the adjustments. EA's can't do that.
